

Transforming Integrated Care Pathways for Clinically Complex Older Adults with Multimorbidity

Join us to explore how integrated, evidence-based and patient-centred care pathways can improve the management of atrial fibrillation in older, frail, multimorbid and polymedicated patients.

Participation is free,
but registration is required.

Atrial fibrillation is a major challenge for healthcare systems, especially when combined with multimorbidity, polypharmacy and clinical complexity in older people.

The AFFIRMO project will share its main results and open a discussion on how they can support future clinical guidelines, care pathways and implementation strategies.

WHO SHOULD ATTEND?

Clinicians, cardiologists, geriatricians, primary care professionals, researchers, patient organisations, policymakers, health system representatives, digital health innovators and EU project partners interested in atrial fibrillation, multimorbidity and integrated care.

 **Aalborg University | 12:30–18:00**
Copenhagen, A. C. Meyers Vænge 15, 2450

 **Online on Teams | 13:00–17:00**

PROGRAMME HIGHLIGHTS

- ✓ AFFIRMO context and state of the art in atrial fibrillation care
- ✓ Interventional study results
- ✓ Multimorbidity, polypharmacy and clinical complexity
- ✓ Health costs and sustainability of care pathways
- ✓ Patient empowerment and engagement
- ✓ Panel discussion on guidelines and future patient care pathways, with the participation of other EU-funded initiatives working on atrial fibrillation, digital health, personalised care and AI-supported decision-making, including **ARISTOTELES**, **TARGET** and **EHRA-PATHS**
